DETAILED ACTION

Allowable Subject Matter

1. Claims 6-13, 21-28 allowed.

Prior art fails to show at least one reduced height stator tooth having at least two reduced height stator tooth laminate layers horizontally off-set from an vertically formed towards each other, the reduced height stator tooth positionable adjacent to the head stack assembly for allowing the head stack assembly to pivot over the reduce height stator tooth.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-4,14-19, 29-30 are rejected under 35 U.S.C. 102(a) as being anticipated by Morita(5798583).

Morita discloses spindle motor in figs.1-6 comprising: a spindle motor hub (30); a magnet (38) radially attached about the spindle motor hub; and a stator (32) including a stator rim (43) formed of at least two vertically stacked stator rim laminated layers a plurality of stator teeth (44) arrayed about and internally extending from the stator rim, and the stator teeth being sized to fit about the magnet in operable communication therewith. Wherein; the stator teeth includes laminated layers having at least one

Art Unit: 2834

reduced height stator tooth (44), the reduced height stator tooth has fewer layer than the remainder of the stator teeth and the reduce height stator tooth being positionable adjacent to the head stack (20) assembly for the purpose allowing the head stack assembly to pivot over the reduced height stator tooth. Morita also shows the reduce height stator tooth having distal shoes extending (45,45A) and the reduce height stator tooth (44) having a width greater (w2) than a remainder of the stator teeth (fig.6) and a reduce height stator tooth having laminating layers formed to have second thickness (43) less than the first thickness (45) for the purpose of improving the magnetic circuit characteristic.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karen B Addison whose telephone number is 571-272-2017. The examiner can normally be reached on 8:00 to 4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Darren Schuberg can be reached on 571-272-2204. The fax phone number for the organization where this application or proceeding is assigned is 571-272-9306.
